

HOW MUCH SOD WILL I NEED?

Here's a simple method to determine how many square feet of sod you will need. Roughly divide the area(s) to be sodded into rectangles or triangles (see example).

Area A is 12 ft x 12 ft	= 144 sq ft
Area B is 18 ft x 20 ft	= 360 sq ft
Area C is a triangle	
12 ft x 18 ft/2	= 108 sq ft
Total sod needed	= 612 sq ft

Add 5% to 10% extra for filling odd spaces and accuracy of the measurements.
